APPLY WITH YOUR CV AND YOUR COVER LETTER STATING THE ABOVE POSITION TO RECRUITING@BUGATTI.COM

REQUIREMENTS

- Postgraduated qualification in the field of vehicle engineering or in quality
- Experience of 3 years or more in the automotive industry, aerospace or product quality assurance
- Advanced knowledge of initial sample validation and quality methods
- Knowledge and understanding of complex systems making up the powertrain: interior components: e.g. thermal & hybrid engines, automatic gearboxes, fuel tank, hydraulic circuit]
- Professional English required, French and German preferred
- Ability to travel frequently

SKILLS

- Analytical and organizational skills
- Team Spirit and initiative
- Ability to find solutions

TASKS

- Monitor the quality of supplier components:
 - Identify, coordinate and track problems on components, assemblies, vehicles and manufacturing processes, from detection to resolution.
 - Analyze and assess the maturity of production and the quality of supplier deliveries in coordination with development, planning, logistics and manufacturing.
- Coordinate and carry out sampling tests
- Validate initial samples
- Write analysis reports, specifying causes and critical points
- Working closely with internal and external suppliers (updating instructions in supplier manual, coordinating and creating test plans, organising and carrying out tests for key parts)
- Actively contribute to finding solutions for field complaints and after-sales activities
- Supervise measurement activities and the necessary tests, as well as the evaluation of results
- Ensure the documentation and traceability of actions throughout the production process
- Manage projects related to its activity
